TITLE	Trends in Medical School Applicants & Matriculants 1983-1992.
INSTITUTION	Association of American Medical Colleges, Washington, D. C.
PUB DATE	93
NOTE	77p.
AVAILABLE FROM	Association of American Medical Colleges, 2450 N. Street, N.W., Washington, DC 20037-1129 ($19).
PUB TYPE	Statistical Data (110) -- Reports - Descriptive (141)
EDRS PRICE	MF01/PC04 Plus Postage.
DESCRIPTORS	*Academic Achievement; *Enrollment Trends; Ethnic Groups; Grade Point Average; Higher Education; *Medical Education; Physicians; Professional Education; Racial Differences; *School Demography; Sex Differences; Statistical Data; Student Characteristics; *Trend Analysis
IDENTIFIERS	Diversity (Student); Medical College Admission Test

ABSTRACT

This report presents statistical data in charts, graphs and tables illustrating trends in undergraduate medical school applicants and matriculants over the past decade. It highlights information at the milepost years of 1983, 1987, 1991, and 1992. Major trends are identified in the following areas: (1) the applicant pool (has been increasing since 1988); (2) number of matriculants (has remained relatively constant over the last 10 years; (3) gender (women applicants rose from 34.0 percent in 1983 to 41.8 percent in 1992; (4) race/ethnicity (proportion of white applicants has declined from 79.5 percent in 1983 to 65.0 percent in 1992); (5) age (the mean age of applicants is relatively unchanged); (6) premedical overall grade point average (has declined slightly from 3.31 to 3.24); (7) premedical science grade point average (has declined slightly from 3.23 to 3.13); and Medical College Admission Test scores (no trend data available due to a major revision of the test in 1992). Data are also provided on parental occupation, state of residence, size of hometown, citizenship, undergraduate major, grade point average by ethnicity/race, and admission test areas of assessment. SUMMARY

The Association of American Medical Colleges (AAMC) acquires data on applicants and matriculants to assist medical schools in their selection of students. These data are summarized annually in TRENDS IN MEDICAL SCHOOL APPLICANTS AND MATRICULANTS.

Data on the demographic characteristics of applicants and matriculants, their backgrounds, academic antecedents, and MCAT scores are reported here in both graphical and tabular formats. The report highlights information at milepost across ten years: 1983, 1987, 1991, and 1992. Data prior to 1983, and for other intervening years may be found in previous editions of *Trends*.

Data for 1983, 1987, 1991 have been edited to refine completeness and accuracy since they were published, and may vary slightly from those depicted earlier. The current issue of *Trends* contains the most up-to-date statistics for the years presented.

It should be noted that significant variance exists in the amount of missing data, year-to-year, and across items: For example, 16.0% of 1991 matriculants did not designate their father's occupation, compared with 30.9% of matriculants who did not provide this datum in 1992. Therefore, care should be taken when interpreting these data.

Major Trends

The Applicant Pool. After peaking at 42,624 in 1974, the applicant pool declined steadily until 1988 when there were only 26,721 applicants; a 37.3% decrease over a fourteen year period. The applicant pool has increased consistently since 1988, including, a 12.3% increase between 1991 (33,301) and 1992 (39,410).

Number of Matriculants. The number of matriculants has remained relatively constant over the last ten years. There are only 191 fewer matriculants in 1992 than in 1983.

Gender. The proportion of women applicants has continued to rise over the past decade: to 41.8% in 1992 from 34.0% in 1983. Women constituted 41.6% of matriculants in 1992, compared to 32.6% in 1983. The matriculation rate now is about the same for men and women. In 1983, 47.8% of men applicants were matriculated, compared to 44.9% of women applicants; in 1992, 43.7% of men applicants were matriculated, compared to 43.4% of female applicants.

Race/Ethnicity. Over the past decade there has been a steady decline in the proportion of white applicants, from 79.5% in 1983 to 65.0% in 1992. The representation of black applicants increased slightly between 1983 and 1992, from 7.5% to 8.1%; and other underrepresented minorities (American Indian/Alaskan natives, Mexican American/Chicanos, mainland Puerto Ricans) increased between 1983 and 1992, from 2.6% to 3.0%. The proprotion of other minority applicants, i.e., Asian/Pacific Islanders, other Hispanics, and commonwealth Puerto Ricans increased steadily over the decade, from 10.1% of applicants in 1983 to 19.5% in 1992.

The proportion of white matriculants has delcined over the past decade, from 82.1% of the matriculants in 1983 to 66.0% in 1992. The proportion of black matriculants increased between 1983 and 1992, from 6.1% to 7.4%; and the proportion of other underrepresented minorities (American Indian/Alaskan natives, Mexican American/Chicanos, mainland Puerto Ricans) increased between 1983 and 1992, from 2.6% to 3.8%. The proportion other minority matriculants (Asian/Pacific Islanders,

other Hispanics, and commonwealth Puerto Ricans) increased significantly over the decade, from 9.0% of the matriculants in 1983 to 18.1% in 1992.

Age. In 1992, 57.7% of medical school applicants were in the 21-23 age range, compared with 55.1% in 1983. There also has been a small but steady increase in the proportion of applicants who are 32 or older, from 5.6% in 1983 to 7.6% in 1992. The mean age of applicants is relatively unchanged over the past 10 years: 24.28 years in 1983, compared to 24.48 years in 1992.

The proportion of matriculants drawn from the 21-23 year old population has been relatively constant between 64.4% and 65.8%; and the mean age of matriculants has changed little, from 23.51 years in 1983, compared to 23.70 years in 1992. 23.70 years.

Premedical Overall Grade Point Average (GPA). The mean GPA of all applicants declined slightly over the decade, from 3.31 to 3.24. The mean GPAs of all matriculants has remained fairly stable over this period: 3.49 in 1983, and 3.45 in 1992.

Premedical Science GPA. The mean science GPA of applicants declined slightly over the decade, from 3.23 to 3.13. As with overall GPA, the mean science GPA of all matriculants declined slightly over the decade from 3.44 in 1983 to 3.38 in 1992.

MCAT Scores. Starting in 1991, the MCAT was revised to enhance its predictive value for medical school admission committees and to encourage potential medical students to engage in broad preparation in the humanities, social sciences and natural sciences. The updated MCAT consists of four sections: Biological Sciences, Physical Sciences, Verbal Reasoning, and a Writing Sample. Because 1992 was the first year when MCAT scores are available for a majority of applicants, no trend data is available. However, comparisons can be made between applicants and matriculants and by gender and race-ethnicity.

ACKNOWLEDGEMENTS

While the division of Educational Research & Assessment has primary project responsibility for TRENDS, this publication was produced through the combined efforts of many people from several Divisions in the AAMC, including staff of the Section for Computer Services, Medical College Admission Test, Student Services, and Operational Studies. The Section wishes to acknowledge the major contributions each has made to this effort.

SOURCE OF DATA AND EXPLANATION OF TERMS

Source of Data

All information in this report is drawn from the AAMC Student and Applicant Information Management System database (SAIMS). This database combines information from a number of AAMC sources. Sources of SAIMS data employed in this report are: AMCAS applications from students, the Premedical Questionnaire completed by MCAT applicants, and the MCAT.

Definitions

Applicant. A person who has completed all application materials necessary for consideration by the admission committee according to the rules of the school to which he or she applies.

Citizenship. U.S. citizen and others holding permanent resident status in the United States.

Ethnicity/Race. Self descriptions selected from the following categories: white, Asian/Pacific Islander, American Indian/Alaskan Native, black, Mexican-American/Chicano, mainland Puerto Rican, commonwealth Puerto Rican, other Hispanics. Underrepresented minorities includes: American Indian/Alaskan Native, Mexican American/Chicano, mainland Puerto Rican. Other minority includes: Asian/Pacific Islander, Commonwealth Puerto Rican, and other Hispanics.

Father's/Mother's Occupation. *Clerical*: clerical and sales workers. *Health Professional/Worker:* health professionals, (e.g., nurse, dentist, optometrist, pharmacist, podiatrist, veterinarian); other health professionals requiring certification, (e.g., licensed practical nurse); and health workers other than physicians and those listed above. *Homemaker:* full-time homemakers. *Manager:* managers, administrators, or executives in corporate (non-farm) business. *Physician:* medical doctors and doctors of osteopathy. *Professional:* clergy, engineers, lawyers, teachers, etc. *Sales*: sales workers of insurance, real estate, automobile, other products, etc. and other business positions (e.g., accountants, analysts, programmers, researchers, etc.). *Skilled Worker:* skilled workers, craftsmen and transport or equipment operators. *Small Business:* owners/managers of small businesses *Student:* full-time students. *Unskilled:* farmers, farm managers, farm foremen, form laborers, and (non-farm) unskilled workers, laborers, and private household workers.

Matriculant. An applicant who is matriculated for the first time in the first-year class at a U.S. medical school.

Size of Hometown. *Large city:* population of 500,000 or more. *Moderate city:* population of 50,000 to 500,000. *Small city* (non-suburb): population of 10,000 to 50,000. *Town* (non-suburb) population of 2,500 to 10,000. *Small town:* population less than 2,500.

State of Residence. U.S. Territories: Canal Zone, Puerto Rico, Virgin Islands, American Samoa, Guam, Trust Territories, and Northern Mariana Islands.

Undergraduate Major. *Biological Science:* agriculture, anatomy, biochemistry, biology, biomedical science, botany, chemistry and biology, genetics, human biology, microbiology, neuroscience, nutrition, pharmacology, pathology, psychobiology, physiology, other biological science, and zoology. *Physical Science*: aerospace engineering, architecture, astronomy, biomedical engineering, biomathematics, biophysics, civil engineering, chemical engineering, chemistry, computer science, dual science major, electrical engineering, engineering, environmental science, forestry, geography,

geophysics, geology, meteorology, mechanical engineering, natural science, oceanography, other physical science, and dual science majors. *Social Science:* anthropology, black studies, business, communication, economics, education, home economics, history, international relations, law, military science, journalism, physical education, political science, psychology, sociology, social science, and social work. *Humanities:* art, classics, English, foreign language, humanities, literature, linguistics, library science, music, philosophy, religion, speech, and theater arts. *Math and Statistics:* accounting, mathematics, and statistics. *Specialized Health Sciences:* hospital administration, medical technology, nursing, occupational therapy, optometry, pharmacy, physical therapy, public health, and premedical. *Other:* dual major nonscience, dual major science/nonscience, general science, general studies, honors program, interdisciplinary studies, no major, other, and preprofessional.

Data Notes

Standard Deviation. Due to a change in the formula used for computing the standard deviation, figures for this edition may differ slightly from those in the 1986 edition.

Hometown Size. Prior to 1988 the response categories for hometown size included *the inner city area of a large city* and *other area of a large city*. After 1988 these two categories were combined and became *large city*.

Parents' Occupation. Beginning with 1988 the response categories for father's and mother's occupations were expanded on the data collection instruments. In order to include these data in the report, responses from 1988 and later have been collapsed into the previous categories. For a complete list of the expanded categories the reader may refer to the 1988 AAMC Premedical Student Questionnaire.

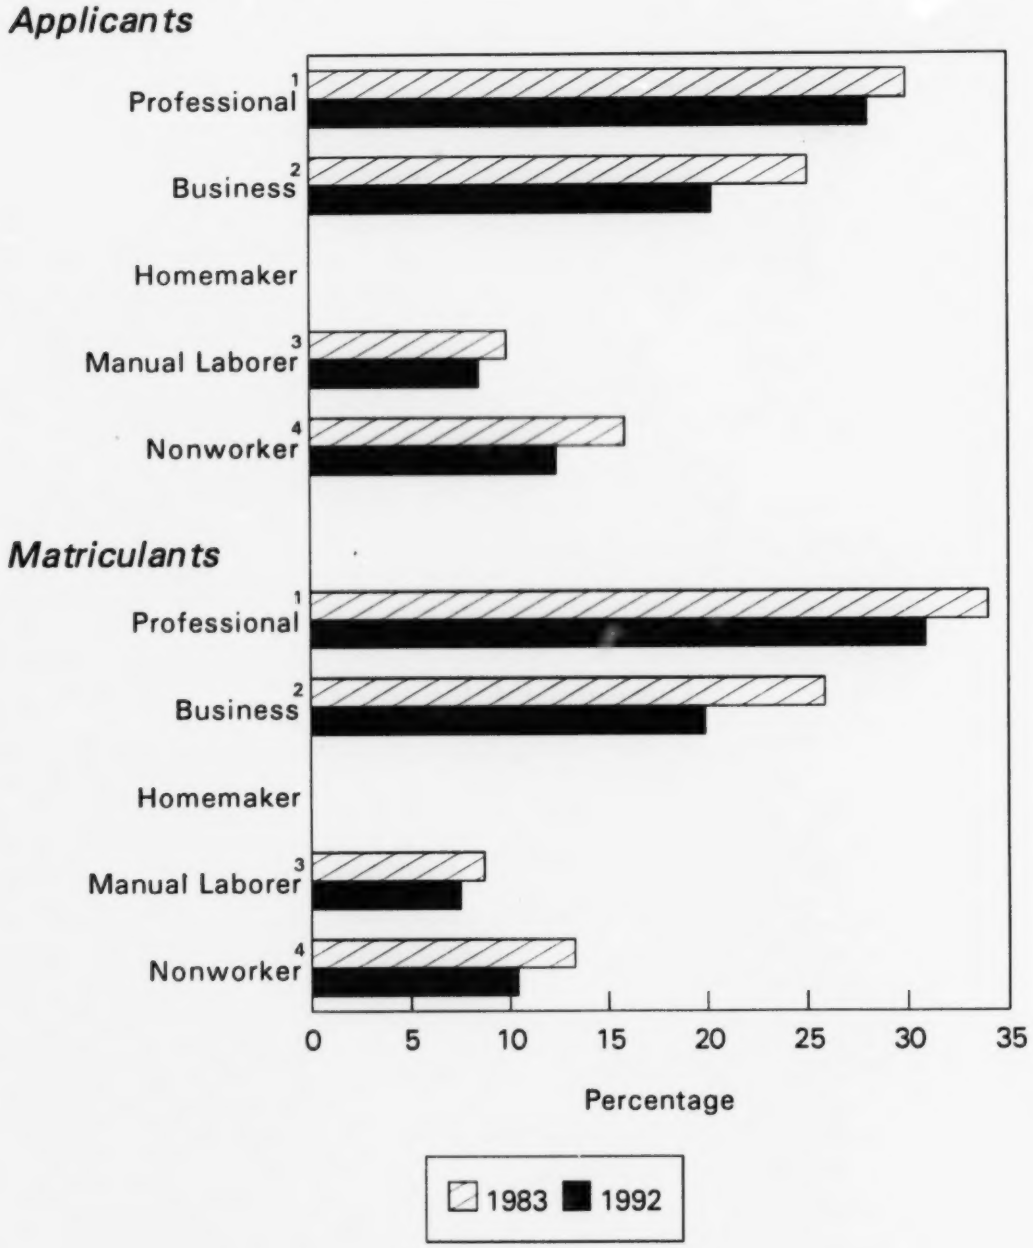
Father's Occupation of Applicants and Matriculants 1983 and 1992



[1] Professional occupations include physicians, health professionals and workers, and other professions.

[2] Business occupations include managers, sales, small business owners, and clerical workers.

[3] Manual laborers include skilled and unskilled workers.

[4] Nonworkers include unemployed, retired, and deceased individuals.
